

Domain Linking Checklist: KorsbergArts.com -> GitHub Pages

=====

GitHub Setup

[] Create a CNAME file in the root of your GitHub repo (e.g., IntarsiaPortfolio):

Content:
www.korsbergarts.com

[] Commit & push the file:

```
echo "www.korsbergarts.com" > CNAME
git add CNAME
git commit -m "Add custom domain"
git push
```

Namecheap DNS Setup

- 1. Log in to <https://www.namecheap.com>
- 2. Go to Dashboard -> Domain -> Manage
- 3. Open the Advanced DNS tab

A Records (for root domain korsbergarts.com):

Type	Host	Value	TTL
----	-----	-----	-----
A	@	185.199.108.153	Automatic
A	@	185.199.109.153	Automatic
A	@	185.199.110.153	Automatic
A	@	185.199.111.153	Automatic

CNAME Record (for www.korsbergarts.com):

Type	Host	Value	TTL
-----	-----	-----	-----
CNAME	www	eckorsberg.github.io.	Automatic

DNS Propagation

[] Wait for DNS propagation (can take up to 24 hours)

[] Monitor using <https://www.whatsmydns.net>

Final GitHub Pages Config

[] Go to GitHub Repo -> Settings -> Pages

[] Confirm custom domain: www.korsbergarts.com

[] Enable "Enforce HTTPS"

Done!

Your site will load at: <https://www.korsbergarts.com>
